PRIYANSHU SARKAR

Aspiring AI / ML / Software Development Intern

Bhubaneswar, Odisha | priyanshu.91007@gmail.com | +91 72092 54563 | GitHub | LinkedIn | Portfolio

SUMMARY

2nd-year engineering student at KIIT Bhubaneswar with hands-on Python, machine learning and full-stack AI project experience: a local-AI outdoor planner, an explainable 3D heart-risk visualiser, and agentic pipelines built at hackathons. Completed Google AI Essentials and a Coursera Machine Learning specialization. Seeking an AI / ML internship.

EDUCATION

Kalinga Institute of Industrial Technology (KIIT), Bhubaneswar | *B.Tech, 2nd Year*

SKILLS

- **Languages:** Python (primary), JavaScript, TypeScript, C, C++
- **Machine Learning:** Neural networks, TensorFlow, regression & classification, decision trees, random forests, XGBoost, SHAP
- **AI:** Prompt design, local LLMs (Ollama), AI agents, responsible AI
- **Web & Backend:** HTML, CSS, React, Tailwind, FastAPI, Express, SQLite **Tools:** Git, GitHub, VS Code, Jupyter

PROJECTS

TouchGrass — AI Outdoor Activity Planner | *React, TypeScript, FastAPI, Ollama* Live demo Source

- Open-source full-stack planner: React/TypeScript/Vite/Tailwind frontend, Python FastAPI backend, SQLite storage, tested with Vitest and Pytest.
- Local AI planning via Ollama (Gemma 3 4B by default) with a built-in fallback planner; OpenStreetMap place discovery, outdoor quests and progress tracking.

Multi-Function Scientific Calculator | *Python* Source

- Desktop app with a GUI: scientific functions, matrix operations, statistics, unit conversions and equation solving, with saved history and themes; modular codebase.

Machine Learning Coursework | *Python, Jupyter* Advanced Learning Algorithms Supervised ML

- Hands-on labs covering neural networks, backpropagation and TensorFlow, ML diagnostics, decision trees, random forests, XGBoost, regression and classification.

HACKATHONS

InvoicePilot AI — Rank 12 of 285 teams | *Team GoldOmen, GDG on Campus KIIT*

- Built an agentic invoice pipeline with a 4-person team: structured extraction, validation report, policy check, risk score and recommendation, with a full audit trail of every agent step.

CardioMap 3D — Explainable Heart-Risk Platform | *Multimodal AI Hackathon 2026, KamandPrompt IIT Mandi* Source

- AI-powered coronary artery disease research platform with an interactive 3D heart, vessel-level risk prediction, and SHAP explanations of each prediction.

CodePulse — AI Application Issue Explorer | *IBM Bob hackathon, React, Express* Source

- Scans a codebase, explains bugs, security and performance issues with grounded evidence, and visualizes their impact across the app. Built with IBM Bob IDE.

CERTIFICATIONS
